

Truth happens.

Open Source Architecture = Freedom = Choice

RED HAT DEVELOPER DAY

24 August 2006, Melbourne

Calling all IT administrators and developers.

Red Hat Developer Day, an exclusive Red Hat event will set the benchmark on all things around open source development, techniques, tools and standards. It will bring together Linux developers and users in Australia and help grow the use and deployment of open source technologies through the sharing of technical knowledge and expertise.

Experience the Power of Open Source Architecture

Open Source Symposium

- Melbourne, 23 August 2006
- Sydney, 29 August 2006

The Open Source Symposium 2006 is THE show that will introduce you to the solutions and technologies available from the open source world and is guaranteed to have something for everyone.

Keynote sessions from AMD, IDC, Red Hat and industry speakers will address the hottest topics: open source, open standards, freedom of choice and industry trends.

The symposium will also feature business and technical tracks where you can learn how open source and Linux can create value for your business. Discover how the performance, security and operational agility of your IT systems can be improved without compromising your IT investment. Hear first-hand from customers why Linux is their choice.

IT administrators and developers, prepare to whet your technical appetite with cutting-edge open source technologies for enterprises presented by fellow developers and engineers.

Topics will cover technologies and methodologies such as

- Open Source Architecture;
- Security and identity management;
- Service Oriented Architecture;
- Virtualisation;
- Open Source Certified Stacks;
- SystemTap; 108, and Stateless Linux.

Rediscover choice in enterprise computing.
Spend a day with us and you'll see.
